Cohesive silicone gel-filled breast implants

# PERTHESE®

Implants for Aesthetic and Reconstructive Surgery

# PERTHESE®

## > Cohesive silicone gel-filled breast implants

### > Safety

- The PERTHESE® breast implant is a sterile gel-filled implant made of a trilaminar silicone envelope.

The silicone envelope consists of an internal and external layer made with a high mechanical resistance medical grade silicone elastomer and an intermediate barrier layer to significantly reduce gel bleed.

The elongation of the shell is greater than 500%. These implants form an extremely soft and resilient structure, limiting gel migration to a minimum.

- The PERTHESE® mammary prosthesis is manufactured and packaged under ISO 9001 and ISO 13485 quality standards applicable to medical devices. Quality controls are performed at all stages of the production.

- Each implant has engraved on the patch the manufacturer's identification, the serial number and the volume (in cc).

- The PERTHESE® breast implant is provided sterile within a rigid double blister package in order to ensure security and convenience. The prosthesis is sterilized by ethylene oxide under a validated sterilization cycle.

### > Tolerance

- The micro-textured envelope provides a soft envelope while allowing a non-aggressive disorganisation of the collagen structure.

The micro-texture carries several guarantees :

- Reproducible texture, identical from one implant to the other,
- Non alterable envelope physical features.

**PERTHESE® breast implants minimize the risk of surrounding hard tissue formation by favouring a gentle fastening to peripheral tissue as well as a disorientation of the capsule fibrous elements.**

**The PERTHESE® range comprises 2 lines of breast implants :**

#### PERTHESE®

The gel of the PERTHESE® line is very soft. It is the gel that has been traditionally used in PEROUSE PLASTIE's breast implants.

The PERTHESE® line is available in low, moderate, moderate plus, high or ultra high profiles.

#### PERTHESE® Sensitive

The gel used in the PERTHESE® Sensitive line is elastic and slightly firmer than the PERTHESE® line gel.

The PERTHESE® Sensitive line is available in moderate, moderate plus, high or ultra high profiles.

## > Indications

- Contour reconstruction and size augmentation following a subcutaneous mastectomy for benign disease, e.g., chronic cystic mastitis, or for reconstruction and augmentation for correction of defects following radical mastectomy procedures.
  - Unilateral or bilateral mammary augmentation or reconstruction to surgically correct various congenital or acquired anomalies such as amastia, aplasia, hypomastia, hypoplasia or following a reduction mammoplasty or for cosmetic purposes.
- Criteria for patient selection are the sole responsibility of the surgeon.

## > Precaution for use

Precautions for use should be considered by the surgeon prior to the use of a PERTHESE® breast implant :

- No evolving breast cancer at the time of implantation, even if a breast reconstruction can be considered in the case of a controlled metastatic syndrome, the prerequisite being to well balance the benefits to the patient with the consequences of the surgical procedure and its non-interference with the required carcinologic treatments.
- If the patient exhibits a lack of skin it is the sole responsibility of the surgeon to decide the use of an expansion technique or a tissue graft.
- Patient is not willing to accept the possibility of multiple surgeries for revision, which could be related to a lack of understanding, or inappropriate motivation, or to a history of repeated failures following cosmetic augmentations or subcutaneous mastectomy.
- On a general point of view, the health condition of the patient should be considered in view of the type of surgical procedure and the required anaesthesia.
- The patient should be informed of the existence of alternatives to breast implants surgery and/or to the availability of non silicone gel filled breast implants.

Each patient must be evaluated by the surgeon to balance the risk/benefit to the patient.

## > PERTHESE® Range

- Silicone gel-filled breast implants
- Inflatable breast implants
- Tissue expanders
- Testicular implants
- Silicone sheetings

## > Contraindications

PERTHESE® mammary prostheses should not be implanted in a patient who has :

- a general or localised infection of the mammary sphere,
- an ongoing pregnancy,
- a history of autoimmune disease.

## > Warranty

PEROUSE PLASTIE warrants that reasonable care in selection of materials and methods of manufacture were used in fabrication of this product.

PEROUSE PLASTIE shall not be liable for any incidental or consequential loss, damage, or expense, directly or indirectly arising from the use of this product.
